The experiment Milgrama is an experience in social psychology conducted by Stanley Milgram in 1963. This psychologist studied at the University of Yale University. This experiment was widely publicized and popular as in scientific and social circles.

Some scientists called this experience as one of the most cruel in the history of psychology. Before the participants of the experiment, the task was to awaken the sadistic inclinations in itself, consciously causing pain and torment towards other people.

Today you will learn the details of the Milgram experiment. Who is Stanley Milgram

Stanley Milgram was born in New York on August 15, 1933. He received primary education at the James Monroe School, studying in one class with another famous psychologist Zimbardo psychologist.

At the end of this educational institution, Milgram enters the Royal College in New York to the Faculty of Political Science. However, soon it becomes clear that this scientific sphere does not cause much interest. And yet he managed to finish studying. Stanley Milgram.

During the training Stanley seriously interested in the specialty "Social Psychology". He even wanted to enter Harvard, but he did not work out because of the lack of relevant knowledge.
